

INDEX

- adipose tissue, 44
- Ansys HFSS, 48
- Ansys high-frequency structure simulator *see* Ansys HFSS
- antenna
 - fabrication, 74, 77
 - performance parameters, 52, 74
 - radiation efficiency, 54
 - pattern, 33
- attenuation, 52
 - signal, 53
- biocompatible coating layer, 75
- bio-encapsulation, 56
- biotelemetry devices, 12
- bone tissue, 45
- circular polarization, 107
- computer simulation
 - technology microwave studio, 48
- connectivity, 3
 - wired, 3
- conventional pacemaker, 86
- coplanar waveguide, 54, 106–07, 112–13
- data privacy and security in IOHT, 11
- dermis, 43
- dielectric materials
 - substrate, 25–26
 - high, 62
- dipole antenna, 27
- electrical properties of human tissues, 45
- electromagnetic bandgap, 70–71
- encapsulation, 26
- epidermis, 43
- fractal, 29
 - geometries, 62, 64
- gastrointestinal tracking, 23
- hypodermis, 43
- implantable antenna, 21, 27, 35, 45, 47, 55, 62, 65, 85, 106
 - components, 23
 - parameter, 30
- IMD, 85

implantable medical devices *see*
 IMD
 industrial, scientific, and medical
 bands *see* ISM bands
 Internet of Healthcare Things

 IoHT, 7, 9
 components, 8
 challenges, 11
 characteristics, 2
 architecture, 7
 user adoption, 12
 ISM bands, 22

 leadless cardiac pacemaker, 87,
 96

 metasurfaces, 72
 minkowski fractal antenna, 64
 muscle tissue
 characteristics, 44
 effect, 44

 operating frequency bands, 20,
 22–23

patch antenna, 28
 permittivity, 41
 phantom models, 50–51
 breast, 118–20
 PIFA, 29, 48, 63, 74, 88
 pin shorting, 63
 pre-fabrication simulation, 48

 radiated power, 54–55
 pattern, 32
 radio frequency, 21
 reflection coefficient, 34
 return loss, 35

 sensors, 5
 signal attenuation in tissues, 43
 specific absorption rate, 65–67,
 69
 synergistic effect, 44

 ultra-wideband, 23

 wireless connectivity
 advantages, 4
