

INDEX

- activated
 - carbon, 11
 - energy, 71
- addition, 61, 104, 127, 131, 152, 154
- adsorption, 112
- agitation, 63–64, 68–69, 74–76
 - speed, 74–75
- agricultural waste, 79
- ammonia solution, 22
- Ananas comosus*, 41
- artificial core, 119
- ASTM D2369, 102
- BADGE *see* bisphenol-A
 - diglycidyl ether
- basins, 140
- biochar, 2, 12, 38–43, 46, 49, 53
 - production, 12
 - surface area, 48
- bioethanol, 59, 61–64, 66–73, 76, 78
 - fermentation, 61
- biomass, 2, 12, 41, 62, 66–69, 76, 79, 82, 95
 - pulverized, 79–80
- bioreactor, 61, 72
- bio-sorbent, 40–41
- bisphenol-A diglycidyl ether, 100
- brunauer emmett teller analysis, 43, 46
- BYK-054, 101
- BYK-358N, 101
- carbon
 - emissions, 18
 - capture, 10–11, 13, 27, 29
 - sequestration, 37
 - storage, 1, 14, 22, 37
 - utilization and storage, 9
- carbon dioxide, 21–22
 - absorbed, 23, 27
 - absorption, 31
 - adsorption, 37, 49
 - capture and storage, 142
 - concentrations, 21
 - emissions, 37
 - injecting, 14–16
 - separation, 143
 - sequestration process, 139

- storing, 13
- transportation, 13
- cellulose, 48–49, 82
- CEOR *see* chemical-enhanced oil recovery
- ChCl *see* choline chloride
- chemical-enhanced oil recovery, 112
- choline chloride, 23, 25, 33
- CMC *see* critical micelle concentration
- coatings, 99–07
- concentrations, 90, 91, 107, 114, 116, 127, 133
- critical micelle concentration, 113
- cyanide, 51
- decomposition temperature, 25
- deep eutectic solvent, 11, 23
 - structure, 24
 - synthesis, 24
- DES *see* deep eutectic solvents
- disperbyk-2152, 101
- dried pineapple waste, 41
- durable materials, 13
- dynamic models, 150
- economic affordability, 8
- energy, 80, 84
 - security, 6
 - transition, 1
- enhanced, 2, 111, 133–37, 146
 - oil recovery, 9, 16, 140
- environmental sustainability, 7
- epoxy, 97–09
 - coatings, 106
 - touch-dry time, 106
 - viscosity, 106
- epoxy coatings, 13, 98–99
- explosibility, 80
- fourier transforms infrared spectroscopy, 29
- FTIR *see* fourier transforms infrared spectroscopy
- functional group, 33, 44
- geological storage, 14–16, 145
- global policy, 17
 - warming, 37
- glucose concentration, 62
- green alternative, 12
- hartmann tube test, 84, 86
- high-solid epoxy, 103–04
- hydrophilic, 112
- hydrophobic, 112
- impregnation effect, 53
- increased, 69, 71, 73–74, 76, 80, 90, 123, 155
- incremental oil recovery, 148
- inorganic ions, 61
- interfacial tension, 113
- International Energy Agency's, 3

- low-carbon technologies, 2
- low-viscosity coatings, 102
- Luedeking–Piret model, 69–70

- metal salts, 40
- metal-organic frameworks, 37
- models, 61

- natural gas production, 21
- net zero emissions, 1–2, 4, 6

- ocean alkalinity, 15

- palm oil, 12
 - mill effluent, 59
- permeability, 120
- phase behavior, 128
- photosynthesis, 15
- physico-chemical method, 40
- pineapple *see Ananas comosus*
- pineapple waste biomass, 38
- porosity, 119
- postcombustion, 22
- propylene glycol monomethyl ether, 98–99
- pycnometer, 121
- pyrolysis, 39–40, 42
 - temperature, 46, 48
- renewable, 1, 8, 78–79
- renewable energy policy, 18
- rheobyk-430, 100
- rice husk, 87
- rotating disc contactor, 27
- rheology modifiers, 100

- SEM *see* scanning electron microscopy
- Saccharomyces cerevisiae*, 59–60
- scanning electron microscopy, 43, 48
- shear stress, 75, 125
- solar farms, 8

- terrestrial ecosystem storage, 15
- thermal death activation energy, 72
- titanium dioxide, 100, 105

- volatile organic compounds, 101

- xylene, 104, 107

- yeast *see Saccharomyces cerevisiae*

- zinc chloride, 40
- zwitterionic surfactants, 113
