

INDEX

- abiotic, 1, 15
- acclimatisation, 66, 107–08
- adventitious shoot, 7
- antibiofilm, 73, 74
- antibiotics, 63
- antidiabetic, 86
- antihyperalgesic, 73
- Arabidopsis thaliana*, 15
- automated tissue culture, 21
- auxin, 31, 34, 48
- basal media, 63
- biotechnology, 19
- callus, 10, 30–32
 - cultures, 30, 33
- cat's whiskers, 83
- chemical desiccation, 32
- clones, 2
- cotyledonary nodes, 104–05
- crop improvement, 15, 31
- cryobionomics, 24
- cryopreservation, 24
- cytokinin, 3, 49, 63–64, 75–76
- desiccation resistance, 37
- dicotyledons, 50
- dormancy, 36
- explant sterilisation, 100
- gene pool, 18
- genetic
 - engineering, 24
 - transformation, 24, 61
- germplasm conservation, 24
- gibberellins, 6
- hybrid, 15, 24
- hyperglycemia, 45
- in vitro*, 2, 31, 47, 58–60, 101
- mass propagation, 1, 59
- media composition, 36, 64
- micropropagation, 2, 4, 16–18, 76
- microshoots, 77
- molecular breeding, 15, 17
- Moringa oleifera*, 43–44
- morphogenetic response, 39
- Mucuna bracteata*, 99, 101–02
- nanomaterials, 31

organogenesis, 3, 7–8, 51, 59,
102

Orthosiphon stamineus, 83, 86

osmotic stress, 32

PGR *see* plant growth
regulators

plant growth regulators, 3, 6,
49, 51, 63

plant tissue culture, 15

plasticity, 30–31

ploidy, 64

pluripotency, 15

protoplast, 3, 24, 59

reactive oxygen species, 45–46

root initiation, 49, 106

rosmarinic acid, 87

ROS *see* reactive oxygen species

scalp culture, 59, 61

scarification, 101

SE *see* somatic embryogenesis

sinensetin, 87

somaclonal variation, 3

somatic embryogenesis, 3, 10,
30, 61

terpenoids, 73

tissue culture, 15

totipotency, 1, 15

type 2 diabetes, 45

virus-free plants, 48

Zingiber officinale, 71, 76
